Rackwall Edison panels were originally designed to be used as circuit outputs for rack based dimmers using terminal blocks. Panels are based around the 19 pin Soca Multipin and Nema 5-20r duplex U-ground connectors. Multipin circuits are wired directly to Edison duplex. 12 gauge 36" leads wired to duplex receptacles (unterminated). Hot/Neutral wire pairs are labels for terminal block termination. Connectors are arranged in Black and White groups to allow easy identification. Panel construction is made from mild steel, powdercoated black w/ standard IEC rack holes.

RWED - Rackwall Edison
