## Generation 3 Brick Drop Box Miniature Power Distro

Connector Sides

Blank Sides

Standard and "Off-the-Shelf" Output connector modules

### Chassis

The Generation 3 brick uses a uniform chassis designed to fit most flanged and panel mount AV connectors. The brick can be used for any 120v, single phase or three phase input and pass thru application. The two piece 18g riveted chassis is powercoated black with matching nylon corner guards. The brick can be used on the ground, behind line arrays or with optional clamping adaptors, hung horizontally from lighting truss.

### Modules

The Gen 3 brick comes standard with two sides having (6) white 5-20 duplex Edison connectors. Two of the sides use standard blank modules. 13 other standard modules are available to allow the brick to service colored Edison U-Ground, twistlock or miniature Powercon loads. Three different breaker modules allow the brick to become a self-contained breakered power distro. Note: L6 G3 bricks are only available with L6 modules and optional pass thru.

Clamping Adaptors

### Customize

The Gen 3 brick was designed with customization in mind. Mixing and matching panels, loading up all four sides and/or custom module designs create an infinite number of unique combinations. Contact Dimmerrack for special requests to meet your application.

Using the same input connector and module output connectors creates a truss or floor splitter. Clamping adaptors allow G3 brick to use standard theatre clamps and are sold separately.
